DETAILED ACTION

Receipt is acknowledged of applicants' Amendment and Response filed on February 3, 2003

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 3-5, 7, 9-11 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over RD 382014 A (February 1996) in combination with Pung et al. (WO 9925318). The RD reference teaches a textured wipe for treating the skin wherein a pattern of texture is applied to a substrate that is relatively non-textured by a hot-melt or plastic printing technique (See abstract provided). Polyolefins, polyesters and ethylene vinyl acetate are used to form the textured pattern. Area coverage, patterns, colors and thickness of the texture can be widely modified. The coverage area ranges from 1% to 100% of the substrate area. The thickness ranges from a few millimeters to 50

Art Unit: 1615

millimeters. The texture resins also contain active ingredients or controlled solubility active agents.

The RD reference further does not expressly teach the type of material that composed the substrate.

Pung teaches a cleansing wipe made from a single-layer, non-woven substrate (Page 2, line 72 – Page 5, line 173). The average basis weight of the substrate is from about 40 to 90 grams per square meter (Page 5, lines 164-173).

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to choose a suitable substrate for producing a textured cleansing cloth.

One of ordinary skill in the art would have been motivated to do this to provide a sturdy yet flexible cloth that is suitable for the various parts of the body the cloth could be used for (e.g., the hair, the face, the feet, the torso).

Therefore, the invention as a whole would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made.

The RD reference does not expressly teach the same exact surface area coverage range. The RD reference does not teach the specific shapes of the raised elements on the wipe. The RD reference further does not expressly teach the diameters of the raised texture.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to change the particular surface area of the substrate that is covered by the texture resin. It also would have been obvious to a person of ordinary

Art Unit: 1615

skill in the art to employ various shapes and diameter sizes. There is no criticality seen in applicants' claimed shapes and diameter sizes.

One of ordinary skill in the art would have been motivated to do this to provide various patterns and shapes, to provide more or less abrasive material to clean the skin as well as to provide for an aesthetic purpose.

Therefore, the invention as a whole would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over RD382014 A (February 1996) in combination with Pung et al. (WO 9925318) in further combination with Thomas et al. (US 5116563). The teachings of the RD reference and Pung are discussed above. The RD reference does not expressly teach that specific hot-melt technique for producing the raised texture pattern. The RD reference does teach that the Thomas reference discloses the suitable hot-melt techniques. Pung teaches the suitable materials for the substrate.

Thomas teaches one suitable hot-melt technique to be the gravure printing technique (Col. 5, lines 5-33).

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to implement various hot-melt techniques for producing the textured pattern for the cleansing wipe comprising various substrates.

One of ordinary skill in the art would have been motivated to do this based on availability and expense of the equipment used for such a technique.

Art Unit: 1615

Therefore, the invention as a whole would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made.

Response to Arguments

Applicants' arguments filed on February 13, 2003 have been fully considered but are found not persuasive. Applicants argue that the RD reference fails to teach or suggest a dry textured substrate that provides a skin or hair benefit. Further, applicants argue that the prior art fails to teach or suggest the various types of materials that can be used for the substrate, the basis weight of that substrate or the diameter of the raised elements produced on the substrate.

The Examiner would like to point out that the RD reference teaches a dry substrate with raised elements for removal of BM from the skin thereby imparting a skin benefit by removing waste to clean the skin. In addition, the limitation of providing a skin or hair benefit is found in Claim 10, 13 and 15. Applicants' arguments with regard to the skin or hair benefit are not commensurate in scope with all of the instant claims. Therefore, applicants' arguments to the contrary are unpersuasive.

Further, with regard to the substrate and raised elements limitations, It is the position of the Examiner that these are limitations that would be routinely determined by one of ordinary skill in the art, through minimal experimentation, as being suitable, absent presentation of some unusual and/or unexpected results. The results must be those that accrue from the specific limitations.

Art Unit: 1615

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Joynes whose telephone number is (703) 308-8869. The examiner can normally be reached on Mon.-Thurs. 8:30 - 6:00, alternate Fri. 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K. Page can be reached on (703) 308-2927. The fax phone numbers for the organization where this application or proceeding is assigned are (703)

Art Unit: 1615

305-3592 for regular communications and (703) 305-3592 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1235.
